

## novaConnect

### Prerequisites

- Windows 2003 Server SP2.
- Lotus Notes/Domino versions 6.5.x - 8.0.x.
- Ensure the Domino server has port 80 enabled (or 443 if the client requires SSL).
- An ADMIN ID or a Notes Admin capable of signing the database.
- Google Enterprise Domain

### novaConnect™ Overview

The novaConnect™ tool enables Free/Busy lookups between Lotus Notes and GMail. The tool is comprised of two agents and one profile form/document. The "Incoming" agent manages Free/Busy lookups from Google to Notes and the "Outgoing" agent manages requests from Notes to Google. Please note novaConnect™ operates in all server environments but must **\*\*reside\*\*** on a Windows 2003 Server

### Typical Installation & Configuration

If novaConnect™ will reside in a different domain than your mail servers, you must first create an Adjacent Domain Document (Admin Configuration/Messaging/Domains). Create the document on the server where novaConnect™ resides, then add the Domain that contains the mail servers you are trying to reach. Finally, from the Calendar tab, enter the name of a HUB mail server that resides within the mail domain you are trying

### How Does It All Work?

Tempus Nova is the leading developer of the tools Google uses to migrate Lotus Notes data to Google. We have developed **novaConnect™**, a unique one of a kind tool that synchronizes Free/Busy Information Between Google and Lotus Notes.
