

novaMigrate

Mail migration

- Supports both user self-service and server side migrations
- Migrates mail on the server and locally stored archives
- Migration of all mail including attachments
- Translates all folders into labels
- Maintains Read/Unread marks
- Converts all Notes email addresses to SMTP addresses
- Allows for migration of a specific date range of emails

Calendar Migration

- Supports both user self-service and server side migrations
- Supports migrations of a specific date range of calendar entries
- Converts all time and date settings to universal time to eliminate any time-zone issues
- Support for all Notes Calendar entry types: Meeting, Appointment, All day event, Anniversary and Reminders
- Support for repeating calendar entries
- Support for Attendee Status and prevents "fan out"
- Converts all Notes names/addresses to SMTP addresses

Contact migration

- User self-service
- Migrates contacts from the users local address book
- Converts all Notes email addresses to SMTP addresses

novaMigrate for Google Apps enables organizations to migrate their Lotus Notes email, calendar and contact data to Google Apps

Whether your project is 90,000 users spread across six continents or 15 users in a single office, novaMigrate will enable you to migrate all your lotus notes email and calendar to Gmail. novaMigrate also allows you the freedom to migrate users as a server side process managed by administration personnel or as a Self-Service process managed by the individual user.

Mail Migration

Provides the flexibility to migrate mail via Self Service or Server Side.

Calendar Migration

Support for all Notes Calendar entry types: Meeting, Appointment, All day event, Anniversary and Reminders

Contact Migration

Migrates contacts from the users local address book
